

How often do small hidden-zone states arise?

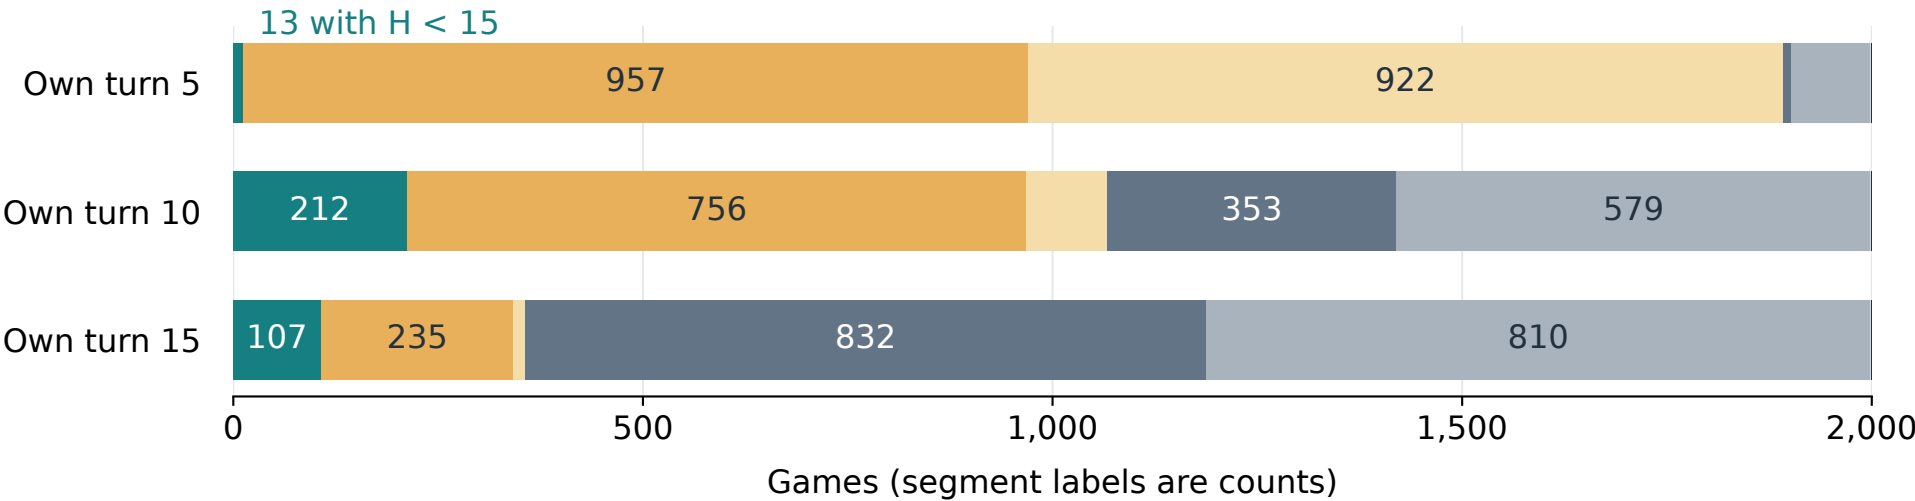

Two final submissions · 2,000 listed games · 1,999 available replays

H = opponent deck + hand + remaining Prizes (card counts, not entropy)

A Ever observed H < 15 at an own MAIN

B Fixed-turn checkpoints: all 2,000 games retained

- Ongoing: H < 15
- Ongoing: 15 ≤ H < 35
- Ongoing: H ≥ 35
- Ended: win
- Ended: loss
- Ended: draw
- Missing replay

Available: 776/1,999 (38.82%) reached H < 15: 602 eventual wins and 174 losses.

Checkpoints: first nonterminal own MAIN; single-option states are included.

All 2,000 listed games are retained; ended games keep their outcomes, not H = 0.

One missing draw remains unresolved. Descriptive counts do not establish causality.
